# ■ WHY TOP DRESS?

- > Levels off your lawn enabling a closer cut without scalping the lawn.
- > Assists in the control of thatch and strengthens lawn density.
- > Improves nutrient absorption.
- > Allows for even growth and improves lawn drainage
- > Sandy soils will be able to retain moisture better and so the lawn will be more resistant to drought.
- > Clay soils will drain better thus improving root development.
- > Top dressing also stimulates the grass to produce new shoots and so results in denser grass cover which helps combat the onset of weed and moss infestation.

Top dressing is carried out routinely by professional green keepers to ensure a top quality finish. If you want a really top quality lawn then you should top dress your lawn annually.
